I. Introduction

The Product and Service Codes (PSC) Manual provides codes to describe products, services, and research and development (R&D) purchased by the federal government. These codes indicate “WHAT” was bought for each contract action reported in the Federal Procurement Data System (FPDS).

The PSC manual has been updated to reflect changes in three areas:

1. The reporting of environmental attributes;
2. Code changes reflecting updates for technology and terminology;
3. The addition or end dating of codes.

The updated codes and reporting processes described in this manual go into effect on October 1, 2011.

II. Guidelines/Policy

Two FPDS data elements are the primary focus of the changes in this manual. The PSC is entered in FPDS in data element 8A, "Product or Service Code." Environmental attributes are entered in data element 8L, "Recovered Materials/Environmental Attributes."

These product/service codes are used to record the products and services being purchased by the Federal Government. In many cases, a given contract/task order/purchase order will include more than one product and/or service. In such cases, the "Product or Service Code" data element code should be selected based on the predominant product or service that is being purchased. For example, a contract for \$1000 of lumber and \$500 of pipe would be coded under 5510, "Lumber & Related Wood Materials."

Similarly, a given contract/task order/purchase order may include products/services with and without environmental attributes. In such cases, data element 8L, "Recovered Materials/Environmental Attributes," should be filled in based on the predominant product or service that is being purchased. For example, a contract for \$1000 of energy star refrigerators and \$500 of standard refrigerators would be coded under 4110, "Refrigeration Equipment" with the "Recovered Materials/Environmental Attributes" data element 8L selected as "energy efficient."

Determining the environmental attributes associated with acquisition of services presents challenges. Many service acquisitions tend to be predominantly labor-based, which in itself does not have environmental attributes. However, in accomplishing the objectives of the services contract, environmental attributes may apply and it is important to provide agencies both the flexibility and information to make such decisions. GSA will update this manual with additional guidance as soon as it becomes available.

III. Environmental Reporting Requirements

Statutory requirements and Executive Order 13514 direct the Office of Management and Budget (OMB) Office of Federal Procurement Policy (OFPP) to report on procurement of products and services with environmental attributes including recycled content, biobased, and energy efficient.

FPDS will be used to collect data on the procurement of products and services with these environmental attributes. The initial phase of implementation allows for the collection of the three attributes listed above plus an “environmentally preferable” attribute which includes other attributes. The following definitions apply to data collected in FPDS.

ENERGY EFFICIENT. Per FAR 2.101, “Energy efficient” means a product that—

- Meets Department of Energy and Environmental Protection Agency criteria for use of the Energy Star trademark label; or
- Is in the upper 25 percent of efficiency for all similar products as designated by the Department of Energy’s Federal Energy Management Program (FEMP).

As used in this definition, the term “product” does not include any energy-consuming product or system designed or procured for combat or combat-related missions (42 U.S.C. 8259b).

BIOBASED. Per FAR 2.101, “biobased product” means a product determined by the U.S. Department of Agriculture to be a commercial or industrial product (other than food or feed) that is composed, in whole or in significant part, of biological products, including renewable domestic agricultural materials (including plant, animal, and marine materials) or forestry materials.

ENVIRONMENTALLY PREFERABLE. Per FAR 2.101, “environmentally preferable” means products or services that have a lesser or reduced effect on human health and the environment when compared with competing products or services that serve the same purpose. This comparison may consider raw materials acquisition, production, manufacturing, packaging, distribution, reuse, operation, maintenance, or disposal of the product or service. For the Product Services Code Manual, this **includes** categories such as EPEAT registered, water efficient, Significant New Alternatives Program (SNAP)/non-ozone depleting, recovered content, and environmentally preferable products/services (EPA designated). For the Product Services Code Manual, environmentally preferable **also includes** building-related or facilities-related services which are associated with “green” industry standards and certifications, such as the US Green Building Council’s (USGBC) Leadership in Energy and Environmental Design (LEED) certification. Environmentally preferable **excludes** products or services that are predominately bio-based or energy-efficient as these two categories are defined in the Products and Services Code Manual.

IV. Reporting of Environmental Attributes in FPDS

The tracking of environmental purchases is going to be accomplished through data element 8L, the “Recovered Materials/Environmental Attributes” data element in FPDS. The “Recovered Materials/Environmental Attributes” data element is an existing field in FPDS which has been modified to allow expanded environmental reporting. The field now includes a dropdown box with the following options:

- RCRA FAR 52.223-4
- RCRA FAR 52.223-4 and 52.223-9
- No clauses included and no environmental included
- Energy efficient
- Biobased
- Environmentally preferable
- RCRA FAR 52.223-4 and energy efficient
- RCRA FAR 52.223-4 and biobased
- RCRA FAR 52.223-4 and environmentally preferable
- RCRA FAR 52.223-4 and biobased & energy efficient
- RCRA FAR 52.223-4 and biobased & environmentally preferable
- RCRA FAR 52.223-4 and biobased & energy efficient & environmentally preferable

There will not be a validation rule associated with this data element. It will be possible to select an environmental attribute that does not apply to the given product or service. For example, one could designate PSC 7350 Tableware as “Energy Efficient.” Therefore, please use caution and select the appropriate field based upon the contract requirements.

V. Changes Included in this PSC Manual Update

This section describes the changes that were incorporated in this PSC Manual update. A summary table and detailed comments for each type of code are provided.

B. General Comments

1. *Code Structure:* The PSCs will continue to be 4-position codes, with products having a digit in the first position and services and R&D having a character in the first position. The only significant change to the content of the codes involves the multi-use facility codes. They have been changed from 3 digits to 2 characters to make more efficient use of the available positions.
2. *Product Codes:* The product codes are managed by the DLA Logistics Information Service and have been incorporated into the manual based on the list of Federal Supply Classes (FSC) obtained from DLA Logistics Information Service in July 2011.
3. *Abbreviations and Formatting.* Abbreviations were made consistent. Where code names included the hierarchy, the delimiters between levels were made to be consistent (e.g., the dash and colon in “Architect and Engineering Services-Construction: Office Buildings”).
4. *Terminology.* The terminology used in the service code names was updated to use modern terms. For example, “Automated Data Processing” (ADP) was updated to “Information Technology” (IT).
5. *New Codes Added.* Based upon feedback and recommendations from the blog, for any service that could not be readily classified under an existing code, a new code was added. The summary table above provides the number of changes. Appendix 1 provides a detailed list of codes.
6. *Codes End Dated.* If two codes covered the same service, one code was retained and the other was end dated. Product codes which were not on the list of FSCs as of July 2011 were also end dated. The ended codes can no longer be selected in FPDS, but the legacy data are retained. The summary table above provides the number of changes. Appendix 1 provides a detailed list of codes.

C. Research and Development Code Summary

1. *New Codes Added.* A seventh R&D stage, “Commercialization” was added to the manual. This stage has been available in FPDS for some time, but it is new to the manual.
2. R&D services may or may not have environmental attributes.

D. Services Code Summary

1. The multi-use facility codes have been changed from a 3-digit scheme to a more efficient 2-character scheme. There are currently 73 types of facilities that fall within 15 categories. It is not efficient to use three code positions to capture the facility type. For example, under the previous scheme, the first facility category, “Administrative Facilities and Service Buildings,” contained three facility types—“Office Buildings,” “Government Conference Space and Facilities,” and “Government Other Administrative and Service Buildings”—and used the codes ending in 111, 112, and 119. Under the new numbering scheme, these same three facility types are captured using codes ending in AA, AB, and AZ, respectively.
2. With only two code positions used for the facility type, it became possible to split the Z codes into Z1 “Maintenance of Structures and Facilities,” and Z2 “Repair or

Alteration of Structures and Facilities.” For example, previously the service called “Maintenance, Repair, or Alteration of Office Buildings” was captured by code Z111. Now, this service is split into two codes: Z1AA represents “Maintenance of Office Buildings” and Z2AA represents “Repair or Alteration of Office Buildings.”

3. The C1 “Architect and Engineering” codes are now able to capture the detailed facility types—not just the facility category. For example, previously the code C111 only captured the facility category— “Administrative Facilities and Service Buildings.” (Three types of facilities fall into this category.) Now C1AA, C1AB, and C1AZ capture the facility types “Office Buildings,” “Government Conference Space and Facilities,” and “Government Other Administrative and Service Buildings,” respectively. Used as a search criteria, “C1A*” still captures the same level of detail (at the facility category level) as the former “C111” code.
4. Note: The C2 “Architecture and Engineering Services – General” codes have not been changed. They capture general services and are not related to specific facility categories/types.

As mentioned above, it can be difficult to determine whether a service has environmental attributes. GSA will update this manual with additional guidance as soon as it becomes available.

The reference tables of multi-use codes for product-based and facility-based codes have been eliminated. Instead, the complete list of 4-digit codes is provided in the manual.

E. Product Code Summary

1. The product codes are managed by DLA Logistics Information Service. The codes have been incorporated into the manual based on the Federal Supply Class (FSC) list obtained from DLA Logistics Information Service in July 2011. As a result, no new codes were added; however, several codes were end dated. The ended codes were primarily associated with detailed ship types and fiber optic hardware types. In the future, the product code list will mirror the FSC list. Any changes to product codes will be handled through the DLA Logistics Information Service change control process. DLA Logistics Information Service can be contacted at fiigs@dla.mil.

VI. Reports

Ad hoc reports may be created for any FPDS data. The Ad Hoc Reports Manual is available at <https://www.fpds.gov>. The Ad Hoc Reports Manual is listed under the Training Tab on the site.

The ezSearch tool provides the ability to search for contracts based on free text. All contracts searched are in Final status. Any DoD contract that is less than 90 days old will not be included in the search. For specific directions on the use of ezSearch, see the help material at the following link: <https://www.fpds.gov/help/index.jsp>.

VII. Change Control Procedures for Product and Service Codes

The General Services Administration manages the services codes and the research and development codes in this PSC Manual and reported in the FPDS. Therefore, any changes to these codes will be processed in accordance with the change control procedures described below. The product codes in this PSC Manual are managed by the DLA Logistics Information Service. Therefore, changes to the product codes are handled via DLA Logistics Information Service and their established processes. Service and R&D code changes are handled via GSA and the JIRA system.

A. Adding, Deleting, or Revising Product Codes

1. Submit the request to DLA Logistics Information Service at fiigs@dla.mil.
2. Submit a copy of DLSC approval notification to the Federal Procurement Data Center (FPDC). The FPDS Product and Service Code (PSC) File shall be updated immediately and the changes included in the next scheduled amendment to the Product and Service Code Manual.

B. Adding New Service/R&D Codes

1. Submit a change request in JIRA at <http://ejira.gsa.gov> outlining the need for the new service code. The request shall include: (a) brief description of proposed new service code with a suggested short title description; (b) authority for new code, e.g. law, regulation, or some other agency requirement; (c) statement on expected contract obligations, extent of congressional interest (if any), or other reasons for separately reporting the information to the FPDS; and (d) a statement that no redundancy exists with any present FPDS product or service code.
2. The FPDC shall review the request for completeness and forward a copy of the request with its recommendation to the Integrated Acquisition Environment (IAE) Configuration Control Board (CCB).
3. The IAE CCB shall either approve or disapprove the request in accordance with the CCB's charter and procedures, stating the rationale in the case of disapproval.
4. The status of each CR can be tracked via JIRA.

C. Revising or Deleting Existing Service/R&D Codes

1. Submit a change request in JIRA at <http://ejira.gsa.gov> with appropriate justification as set forth in Part B above.
2. The FPDC shall review the request for completeness and forward a copy of the request with its recommendation to the IAE CCB.
3. The IAE CCB shall either approve or disapprove the request in accordance with the CCB's charter and procedures, stating the rationale in the case of disapproval.
4. The status of each CR can be tracked via JIRA.

D. Changing Other Parts of the PSC Manual

1. Follow the same procedures in Part C above.

VIII. Frequently Asked Questions

- What changed?

The PSC manual has been updated to reflect changes in three areas:

1. The reporting of environmental attributes.
2. Code changes reflecting updates for technology and terminology.
3. The addition or end dating of codes

- How do I select product/service codes?

For a given contract action, the product or service code should be selected based on the predominant product or service that is being purchased.

- Why is it important to collect codes accurately?

These codes are used to gather data that forms the basis of legally-mandated reports. Policy and acquisition decisions made by Government and private sector executives may be informed by the data captured in and reported from FPDS.

- Why are we collecting environmental attributes?

The purchase of certain environmentally friendly products and services must be reported per statute and executive order. The central collection of certain data through FPDS will minimize reporting burden on agencies.

- How do I determine if a service has environmental attributes

Determining the environmental attributes associated with acquisition of services presents challenges. Many service acquisitions tend to be predominantly labor-based, which in itself does not have environmental attributes. However, in accomplishing the objectives of the services contract, environmental attributes may apply and it is important to provide agencies both the flexibility and information to make such decisions. GSA will update this manual with additional guidance as soon as it becomes available.

- How are environmental attributes captured in FPDS?

Environmental attributes are entered in data element 8L, “Recovered Materials/Environmental Attributes.” The element can capture various combinations of RCRA, energy efficient, biobased, and environmentally preferable attributes.

Section A
Research and Development Codes

Research and Development

If the contract action is for research and development (R&D) work, report an R&D code. Do not assign an R&D code to supplies or housekeeping services purchased in support of research and development work; such supplies shall be coded using the appropriate product PSC and the services using the appropriate service PSC.

The R&D code is composed of two alphabetic and two numeric digits. The first digit is always the letter "A" to identify R&D, the second digit is alphabetic "A to Z" to identify the major category, the third digit is numeric 1 to 9 to identify a subdivision of the major category, and the fourth digit will be 1 to 7, to identify the appropriate stage of R&D shown below.

Stages of R&D Codes (4th Position)—Code Meaning

- (1) Basic Research
- (2) Applied Research and Exploratory Development
- (3) Advanced Development
- (4) Engineering Development
- (5) Operational Systems Development
- (6) Management and Support
- (7) Commercialization

Procurement personnel responsible for R&D actions shall obtain sufficient information from requisitioning personnel to permit accurate classification. When completing this item, the precise R&D Service being purchased shall be coded.

Example: A contract for research on air pollution by aircraft shall be shown under "R&D-Environmental Protection (AH2*)" for air pollution, and not under aircraft. Test and evaluation effort shall be coded under the stage of R&D involved. For example, the testing of a developmental prototype would generally be coded under Code 3, Advanced Development.

Definitions of Stages of R&D

The following terms and categories relating to "research and development" are for management of R&D and RDT&E programs. The term "research and development" normally encompasses the "first" five categories below. For example, construction of recreational facilities at an installation used exclusively or generally for research and development would not normally be procurement of "research and development" but it is sometimes included in the sixth category in order to classify obligations according to the ultimate purpose of the procurement.

- (1) Basic Research - includes all scientific effort and experimentation directed toward increasing knowledge and understanding in those fields of the physical, engineering, environmental, social, and life sciences related to long-term national needs. It provides fundamental knowledge ultimately required for the solution of social, economic, political, physical, or military problems. It forms a part of the base for subsequent applied research and exploratory and advanced development in the various disciplines, and new or improved functional capabilities.

- (2) Applied Research and Exploratory Development - includes all effort directed toward the solution of specific problems, short of major development projects. This type of effort may vary from fairly fundamental applied research to quite sophisticated bread-board hardware, study, programming, and planning efforts. It would thus include investigations and minor development effort. The dominant characteristic of this category of effort is that it be pointed toward specific problem areas with a view toward developing and evaluating the feasibility and practicability of proposed solutions and determining their parameters.
- (3) Advanced Development - includes all effort directed toward projects which have moved into, e.g., the development of hardware for test. The prime result of this type of effort is proof of design concept and/or prototype.
- (4) Engineering Development - includes those projects in full-scale engineering development for Government use but which have not yet received approval for production or had production funds included in the budget submission for the current or subsequent fiscal year. Thus are characterized by major line item projects.
- (5) Operational Systems Development - includes those projects still in full-scale engineering development but which have received approval for production, or production funds have been included in the budget submission for the current or subsequent fiscal year.
- (6) Management and Support - includes all effort directed toward support installations or operations required for general research and development. Included would be construction of a general nature unrelated to specific programs, maintenance and support of laboratories, operation and maintenance of test ranges, and maintenance of test aircraft, equipment, or ships. Costs of laboratory personnel, either in house or contractor, would be assigned to appropriate projects or program areas above.
- (7) Commercialization - Includes all effort directed toward transition of a product from R&D to commercial sales and usage.

In Group 58, more than in any other group, it frequently happens that the same name is listed as an index entry in each of several classes. In addition, that name may also appear as an entry in groups other than 58. Each such entry refers to a distinctly different part or assembly, even though the different items have the same name. The listing of the same names in two or more classes indicates that, in one form, the part or assembly covered by the name is applicable to the equipment covered by one class, and in another form is applicable to the equipment covered by another class. For example, the item name CODER, AUDIO FREQUENCY is applicable to two distinctly different assemblies, one of which has an application in cryptologic equipment, covered by Class 5810, and the other in radar equipment covered by Class 5840. Consequently the name CODER, AUDIO FREQUENCY is an entry under each of the two classes. When an item identification bears a name which is indexed under more than one class of Group 58, or in Group 58 and in some other group, the item will be classified in the same class as its next higher assembly in the manner described in the Federal Logistics Information System (FLIS) Procedures Manual, DoD 4100.39-M. Also excluded from this group are data transmission and communications equipment such as terminals, sensors and other devices designed for use with a configuration of ADPE.

7010 ADPE System Configuration

Notes: A group of general purpose analog, digital, or hybrid electronic or electromechanical devices that are interconnected to operate as a system. Frequently referred to as an ADP system, although the term "system" is not considered definitive. Includes an assembly of devices consisting of a central processing unit (CPU) and the necessary input/output devices, accessorial devices, analog measurement devices, software and/or firmware required to perform the desired objectives. Also includes sub-assemblies and units in which input/output devices, CPUs, and/or accessorial devices or components are incorporated into a single assembly or unit. A specially designed device incorporated into a system shall not influence the classification of the base assembly or unit.

7020 ADP Central Processing Unit (CPU, Computer), Analog

Notes: An analog is a representation in one form of a physical condition existing in another form (e.g., the level of mercury in a tube represents temperature in a thermometer; the angular position of a needle represents speed on a speedometer). This class includes only CPUs that accept as inputs the electrical equivalent of physical conditions such as flow, temperature, pressure, angular position or voltage and perform computations by manipulating these electrical equivalents to produce results for further use.

7021 ADP Central Processing Unit (CPU, Computer), Digital

Notes: Digital refers to the representation of discrete numbers, symbols and alphabetic characters by a predetermined, coded combination of electrical impulses. This class includes only CPUs that accept information represented by digital impulses. Specifically, a device capable of performing sequences of arithmetic and logic operations (a program) not only on data but also on the program which is contained in its internal memory (storage) without intervention of an operator.

7022 ADP Central Processing Unit (CPU, Computer), Hybrid

Notes: Hybrid refers to a combination of analog and digital capability as defined in Classes 7020 and 7021 with conversion capability required for intercommunication.

7025 ADP Input/Output and Storage Devices

Notes: This class includes devices used to control and transfer information to and from a Computer (as modified). The input device is used for transferring data and instructions into a computer. The output device is used to transfer results of processing by the computer to ADP peripheral devices. Input/output devices combine the above functions in the same device. This class includes printers, display units, disk drive units (magnetic, optical and floptical), tape drive units, terminals, data entry devices and transfer units. Also includes Optical Compact Disk (CD) devices used for the storage and retrieval of data and firmware.

Renumbering. Based upon feedback and recommendations from the blog, the multi-use facility type codes have been changed from a 3-digit scheme to a more efficient 2-character scheme. The renumbering process involved end dating some service codes and adding new codes to replace them. The services themselves did not change, except in the case of the C1 “Architect and Engineering” codes, which expanded to capture the detailed facility types—not just the facility category.

Codes End Dated because of Renumbering
